

## Laboratory #2

---

For today's lab, look at the programs in the `demos` package of the `Assignment2` folder. Make sure that you understand what each program does, and make sure that you have full operational understanding and some syntactical understanding of what each statement in each program does. As part your investigation, you should be looking into the resources that are available to you online: the Roberts text, the homepage and documentation for the ACM packages, and the documentation for Java library 1.5.0. Also, you are welcome to ask me questions. When you completely understand all the demo programs, feel free to start assignment 2, which is due on Monday, September 18.
