

**MATH 113: DISCRETE STRUCTURES**  
**WEDNESDAY WEEK 6 HANDOUT**

*Problem 1* (Continued from Monday). Prove that

$$\binom{n}{0} + \binom{n-1}{1} + \binom{n-2}{2} + \cdots + \binom{0}{n} = F_{n+1}.$$

*Problem 2.* Extend the Fibonacci sequence backwards (with negative indices) via the relation  $F_n = F_{n+2} - F_{n+1}$ . Write out the terms  $F_{-5}, F_{-4}, F_{-3}, \dots, F_3, F_4, F_5$  (and maybe a few more in either direction). Come up with a conjecture about the relation between Fibonacci numbers with negative indices and positive indices. Prove your conjecture.

*Problem 3.* Compute the following sums:

$$F_1$$

$$F_1 + F_3$$

$$F_1 + F_3 + F_5$$

$$F_1 + F_3 + F_5 + F_7$$

$$F_1 + F_3 + F_5 + F_7 + F_9$$

Develop and prove a conjecture about the value of  $G_n = \sum_{k=1}^n F_{2k-1}$ .

*Problem 4.* Develop and prove a conjecture about the value of  $F_{n-1}F_{n+1} - F_n^2$ .
