What were the best features of the course/instructor?

Prof Daugherty is very energetic and keeps the atmosphere lively and relaxed.

What were the worst features of the course/instructor?

It was very humbling because of how hard some material was for me.

What advice would you give to a fellow student considering taking this course?

Take this class only if you are ready to work hard. Otherwise, math 31 might be more enjoyable.

What were the best features of the course/instructor?

*- prof was always there to help when I needed it
- pushed me*

What were the worst features of the course/instructor?

We learned A LOT of stuff - especially new concepts/defs - I think I didn't have enough time to let it all settle in, I will likely lose a bunch of what I learned in a few weeks but it would then be easy to relearn

What advice would you give to a fellow student considering taking this course?

be prepared to put time in.

Written Comments

What were the best features of the course/instructor?

I struggled quite a bit, and Professor Daugherty was both good at patiently explaining things and encouraged me to stick with the course, which I really appreciated. Also, as the only girl in the class, it was awesome to have a young woman professor.

What were the worst features of the course/instructor?

I had trouble seeing how it applied in a broader sense. At least, if we can't see how this applies to an average person we could see more of why these things matter within the math world.

What advice would you give to a fellow student considering taking this course?

Seriously think about whether you are prepared for it. Even though I did well in all my previous classes, this was my first upper level math class and the leap up is huge.
