Euler's Method

Assume that you have an IVP that looks like

$$\frac{dy}{dx} = F(x, y), \qquad y(x_0) = y_0$$

Pick an increment of x-steps, called Δx.

Euler's Method

Assume that you have an IVP that looks like

$$\frac{dy}{dx} = F(x, y), \qquad y(x_0) = y_0$$

Pick an increment of x-steps, called Δx.

Start at (x_0, y_0), and plot a segment with run Δx and slope $F(x_0, y_0)$. The end is (x_1, y_1). From each (x_i, y_i), generate (x_{i+1}, y_{i+1}) by plotting a segment with run Δx and slope $F(x_i, y_i)$.
